## Task 2 — Build Your Own Portfolio

### Objective

Design and build your own **personal Portfolio** website to showcase your skills, projects, and professional background.

The goal here is to create something that represents **who you are, your skill level, and your creativity**. While also creating something that's **well structured, visually appealing, and easy to navigate and use**.

### What Your Portfolio should include

There's no single "write way" of creating a portfolio, but here are some key aspects that should be included in your portfolio.

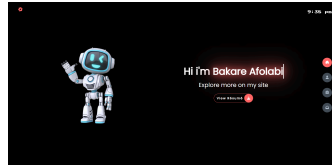

#### 1. Your Unique Identity

- The portfolio should reflect **who you are** as a developer and as a designer.

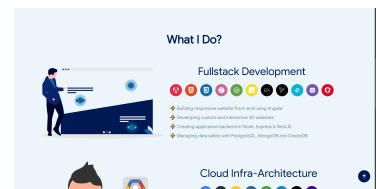

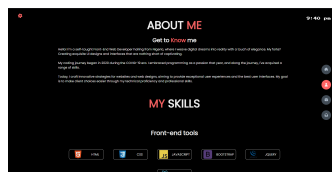

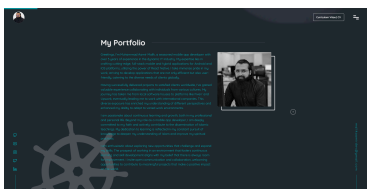

- Think about what makes you stand out using **colors, fonts, layouts, animations** or even **themes**.

## 2. Core Sections

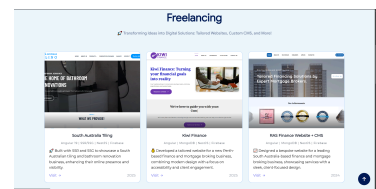

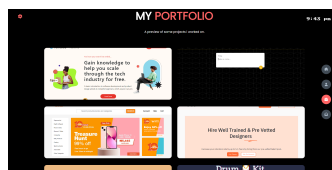

- **Homepage** → A strong introduction with your name, a short bio, and a call to action.

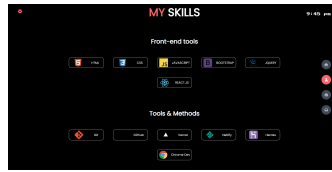

- **About Me** → A short section about your background, interests, and what makes you unique.

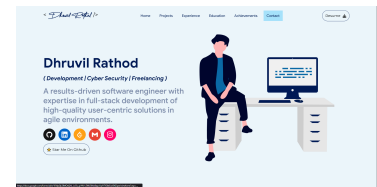

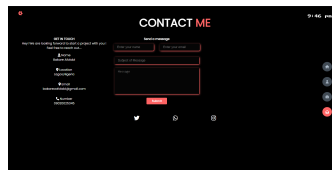

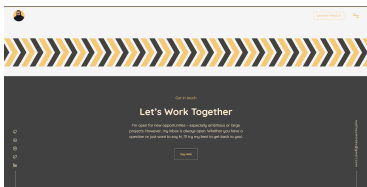

- **Projects** → A section to showcase your past projects, or projects you are currently working on, Include descriptions, visuals, and links to live demos or repositories.

- **Skills** → Highlight the technologies and tools you use. This can be a simple list, a visual representation, or an interactive feature.

- **Contact** → Make it easy for people to reach you (email, GitHub, LinkedIn, or a simple form).

- You can also include additional sections such as **a blog, testimonials, or fun personal elements** that show more about you.

### 3. Responsiveness

Your portfolio should always be responsive, 90% of the time any website you make will be opened from a phone, So always make sure your websites are responsive.

### Bonus

- Use Animations to enhance the user experience and make your website stand out.
- Build more sections, Here are some examples
  - Testimonials
  - Blog / Articles
  - Achievements & Certifications
  - Services (for freelance work)
  - Resume / CV Download
